

Streamline and simplify IT by moving to Microsoft 365 Business Premium

The business landscape is constantly evolving, and to keep pace, your organisation needs to be agile and efficient. One area that often presents a bottleneck is the deployment and allocation of new hardware. Traditional setup methods can be time-consuming and resource-intensive.

By upgrading to Microsoft 365 Business Premium, you'll access powerful features for remote device setup and new security features. This eliminates manual configurations and speeds up hardware deployment.

Benefit	Standard	Premium
Save up 75% off PC/Apple installations		Yes
Additional Cyber Security Features		Yes
Control access to sensitive data		Yes
Improve control over Cloud Apps		Yes
Reduce data leakage		Yes
Remotely wipe devices		Yes
Build Plug n Play infrastructure		Yes
Mobile Management		Yes

If your aim is to simplify hardware deployment while enhancing the operational capabilities of your business, Microsoft 365 Business Premium is the comprehensive solution you've been searching for.

The Digital Tightrope: Balancing Mobile Freedom & Security made easy with Microsoft 365 Business Premium

In today's fast-paced business world, where work happens on the go and decisions are made from the palm of our hands, mobile devices have become the lifelines of business.. Yet, this newfound mobility comes with its high-wire act; one side beckons with the promise of freedom and agility, and the other side warns of the lurking risks and vulnerabilities.

Q: How does Microsoft 365 Business Premium ensure company data doesn't unintentionally get saved to the personal cloud storage of an employee's device?

A: Microsoft 365 Business Premium offers advanced Mobile Application Management (MAM) policies that can be configured to prevent company information from being saved to unauthorised locations, including personal cloud storage. It allows you to control how data is shared and interacted with on personal devices, ensuring that sensitive information stays within the secure confines of your business environment.

Q: Is it possible to keep company data secure on an employee's personal device without infringing on their privacy?

A: Absolutely. Microsoft 365 Business Premium respects user privacy by allowing businesses to manage only the company data on a personal device. With features like application protection policies, you can ensure that business data is secure without taking control of the entire device. This means personal data like photos, personal emails, and apps remain private and under the control of the employee.

If your aim is to simplify mobile deployment while enhancing the operational capabilities of your business, Microsoft 365 Business Premium is the comprehensive solution you've been searching for.

Business Benefits:

- Enhanced Security: The Premium version offers advanced security features, reducing the risk of data breaches.
- Device Management Capabilities: Manage and secure company devices to ensure data integrity.

Indirect Time-Saving:

- Automated security alerts and policies mean less manual monitoring.
- Reduces the administrative burden of manually managing user permissions.

Impact on Business:

- Builds confidence in clients and stakeholders knowing that data is handled with advanced security measures.
- Save time on setting up new or re-purposing hardware for employees.
- Ensures compliance with Cyber Essentials Basic and positions the company favourably for future certifications like Cyber Essentials Advanced or ISO27001.
